

## Surface Matters

Surface/ Solvent or Buffer	Structure	Description	Zeta Potential at pH 7	Salt Stability	Solvent Compatibility
<b>Carbonate</b>	$\text{CO}_3^-$	<ul style="list-style-type: none"> <li>Most easily displaced surface</li> <li>Ideal pH (8-9) and low salt buffer for physisorbing antibodies</li> </ul>	Negative	Low	Water
<b>PEG carboxyl</b>		<ul style="list-style-type: none"> <li>Mixed discrete PEG monolayer with dithiol PEG molecules proximal to the gold and OMe and COOH groups distal</li> <li>COOH groups provide functionality for covalent coupling</li> <li>Stable from pH 4-10 and up to 2X PBS buffer</li> </ul>	Negative	High	Water
<b>PEG-Sulfo-NHS</b>		<ul style="list-style-type: none"> <li>Dried Redispersible powder</li> <li>Amine reactive surface</li> <li>Easiest way to covalently bind an amine containing molecule such as an antibody to the surface of the gold particle.</li> </ul>	n/a	High	Water
<b>Lipoic Acid/ Water</b>		<ul style="list-style-type: none"> <li>Dithiol forms a strong, stable bond with metal surfaces and the acid provides a highly negatively charged surface</li> </ul>	Highly Negative	Moderate	Water
<b>Branched Polyethyleneim ine (BPEI)/ Water</b>		<ul style="list-style-type: none"> <li>Highly aminated, positively charged organic surface coating</li> <li>Large number of free amines for conjugation to targeting molecules</li> </ul>	Highly Positive	Moderate	Water
<b>Polyethylene Glycol (PEG)/ Water</b>		<ul style="list-style-type: none"> <li>Provides excellent dispersibility in water and protic solvents and increases compatibility in biological systems</li> <li>Custom variants available with PEG of different molecular weights and free functional groups for labeling or conjugation</li> </ul>	Neutral	High	Water Alcohols Polar Organics
<b>Silica/ Water</b>	Si-OH	<ul style="list-style-type: none"> <li>Increased particle stability in a wide range of solvents</li> <li>Versatile conjugation surface for attaching functional groups or creating hydrophobic or fluorophilic surfaces</li> <li>Nanoporous structure allows low molecular weight molecules to be loaded into the shell.</li> </ul>	Negative	High	Water Alcohols

Surface/ Solvent or Buffer	Structure	Description	Zeta Potential at pH 7	Salt Stability	Solvent Compatibility
<b>Amine- Functionalized Silica/ Acetate buffer</b>	Si-NH <sub>2</sub>	<ul style="list-style-type: none"> <li>Positively charged silica colloids and silica-coated nanoparticles</li> <li>Useful for binding studies, conjugation with carboxyl-containing molecules through EDAC coupling, or binding to dyes and molecules with isothiocyanate (ITC) or amine-reactive esters</li> </ul>	Highly Positive	High	Water Alcohols
<b>Other Functionalized Silica</b>	Si-SH Si-COOH Si-C <sub>n</sub> H <sub>m</sub> Si-C <sub>n</sub> F <sub>m</sub>	<ul style="list-style-type: none"> <li>Many custom coatings are available to provide specific functionality at the particle surface or create particles compatible with different solvents or composites</li> </ul>	Varies	Varies	Varies
<b>Dodecanethiol / Hexanes</b>		<ul style="list-style-type: none"> <li>Hydrophobic coating renders particles soluble in organic solvents and compatible with non-polar polymer composite materials</li> <li>Can be dispersed in low surface-energy solvents for coating applications requiring uniform particle deposition</li> </ul>	n/a	n/a	Polar and Nonpolar Organics
<b>Citrate/ 2 mM Citrate</b>		<ul style="list-style-type: none"> <li>Most commonly requested capping agent</li> <li>Easily displaceable with other molecules for binding studies or custom functionalization</li> <li>High degree of electrostatic stabilization</li> </ul>	Highly Negative	Low	Water
<b>Polyvinylpyrrolidone (PVP)/ Water</b>		<ul style="list-style-type: none"> <li>Binds very strongly to metal surfaces, giving excellent colloidal stability over a wide range of conditions</li> <li>Nanoparticles can be dispersed in a wide variety of protic and aprotic polar solvents</li> <li>Particles are most stable in high ionic strength solutions and at high concentrations</li> </ul>	Negative	Moderate	Water Alcohols Polar Organics
