

Elabscience

Elabscience Flow Cytometry Antibodies

With selected high-quality FCM monoclonal antibodies and excellent fluorescent labeling technology, Elabscience® FCM antibodies are dedicated to your cell detection and related experiments.

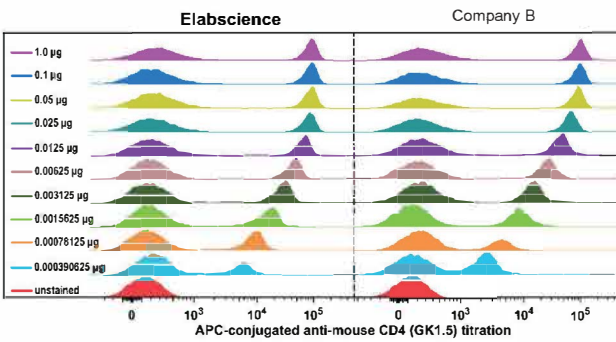

At the same time, Elabscience® offers panel design for customer.

[Advantages]

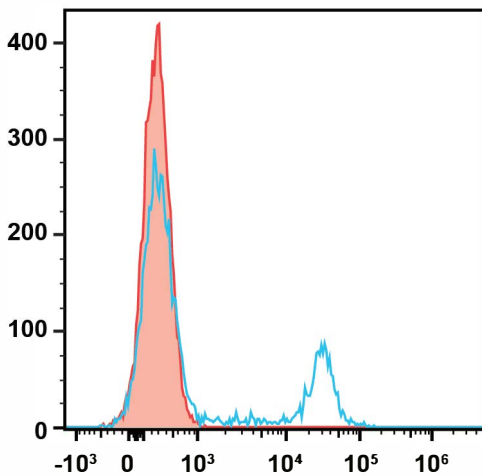

Extraordinary performance in multicolor FCM experiment

Signals of positive cell groups in all detecting channels can be identified distinctly from those of the corresponding negative groups when 6-color flow cytometry experiment is carried out.

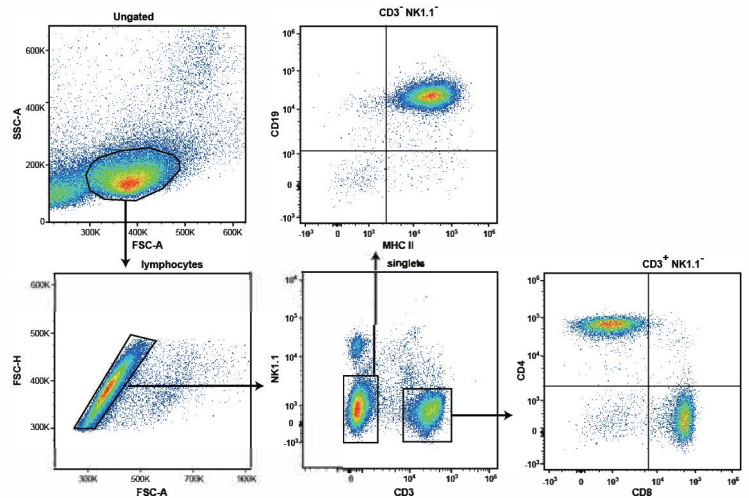

A good separation effect can be achieved under multiple concentration gradients

Optimizing fluorescence coupling technique to reduce the background of FCM dyeing

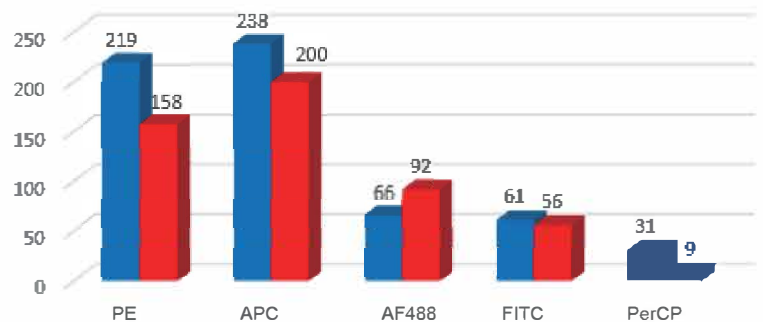

Filled red curve are unstained cells.
Empty blue curve are stained with PE anti-Human CD8a

Advanced labeling technology to guarantee experiment result

Considerable SI (staining index) which is comparable to that of well-known international manufacturers.

SI of anti-mouse CD4

■ Elabscience ■ Company T

The higher staining index, the better separation effect of negative and positive cell groups.

★ Elabscience® has antibodies with 10 dyes now and more colors are coming!

★ Elabscience® has selected commonly used clones as antibody source for FCM antibodies, providing variable targets with anti-Human/ Mouse/ Rat.
