

# Innate Immunity

Since 2000, Everest Biotech has been designing a catalogue containing thousands of goat antibodies against a broad range of human, mouse and rat proteins of biomedical interest.

Everest Biotech's commitment to quality and continuous improvement has been recognised with ISO 9001:2015 accreditation. Everest Biotech customers can be assured they will receive high quality products and excellent customer service.

The immune system can be divided into two parts. The first, innate immunity, is the initial response and first line of defence to pathogens; in which Natural Killer (NK) cells play a vital role. The second, adaptive immunity, is specific and is able to target previously recognized pathogens or antigens.

Mediated by phagocytes, the innate immune response determines the difference between self and foreign pathogens via germline-encoded pattern-recognition receptors (PRRs). It consists of several different components including physical barriers, antimicrobial peptides and cell receptors.
