

Life Science Research 2023

nzytech

Your Partner for Life Sciences

NZYTEch designs, manufactures and supplies key reagents, kits and master mixes for life science research and molecular diagnostics. Powered by in-house Research and Development, NZYTEch engineers products to aid researchers and clinicians around the world - Serving more than 70 Countries, across 5 Continents.

From qPCR Master Mixes and cDNA Synthesis Kits to One-Step RT-qPCR Master Mixes, Key Components for qPCR assays, Bst DNA Polymerases and RNA/DNA Isolation Kits.

NZYTEch is a global supplier-of-choice providing IVD kits for SARS-CoV-2 and Respiratory Viruses detection as well as more than 100 qPCR detection kits for Veterinary, Agro Pathogen, Food/Water and Human Pathogen industries searching for molecular research and diagnostic qPCR kits.

NZYTEch has global database and supply of Glycobiology products. With more than 80 enzyme categories available, listing more than 1000 CAZymes to choose from. As well as analytical test kits for agro-food and fermentation industries.

Committed to the ever growing field of scientific research, our scientists are deeply engaged in the development of novel products every year. Dedicated to advancing science and being your trusted partner in Life Sciences.

PLASMID DNA PURIFICATION

NZYTECH provides kits for the rapid preparation of highly pure plasmid DNA from recombinant *Escherichia coli* strains at different scales (NZYMiniprep, NZYMidiprep and NZYMaxiprep). The resulting purified plasmid DNA is suitable for use in the most demanding molecular biology applications. Buffers for plasmid purification kits, columns and RNase A are also sold separately for your convenience. Our portfolio also includes kits designed for manual or automated large-scale purification of DNA plasmids from *E. coli* in 96-well format (NZYMiniprep 96-well plate), or for the fast purification of multiples DNA molecules simultaneously (NZYDNA Clean-up 96-well plate).

Plasmid DNA kits	Plasmid type	Typical yield	Scale/ Format
NZYMiniprep	high and low-copy number, BACs or cosmids	up to 45 µg	Mini/spin-column
NZYMiniprep 96-well plate	high and low-copy number	up to 15 µg	Mini/96-well plate
NZYSpeedy Miniprep	high and low-copy number, BACs or cosmids	up to 35 µg	Mini/spin-column
NZYMidiprep	high and low-copy number, BACs or cosmids	up to 150 µg	Midi/gravity flow column
NZYMaxiprep	high and low-copy number, BACs or cosmids	up to 1000 µg	Maxi/gravity flow column
NZYMaxiprep Endotoxin Free	high and low-copy number, BACs or cosmids	up to 500 µg	Maxi/gravity flow column

GENOMIC DNA PURIFICATION

NZY gDNA Isolation kits are spin column silica-based systems designed for the simple and rapid small-scale purification of genomic DNA from various sources. Resulting purified DNA has the highest quality and integrity and is suitable for use in most sensitive downstream applications.

Genomic DNA kits	Sample Material	Typical yield	Scale/Format	Time	Application
NZY Tissue gDNA Isolation kit	Animal tissue, cultured cells, bacterial cells, rodent tails, buccal swabs, paraffin embedded tissue and fecal material, whole blood*, serum, plasma, body fluids	up to 35 µg	Small-scale/Spin-column	20 min ²	PCR, qPCR, genotyping, sequencing, enzymatic manipulations
NZY Plant/Fungi gDNA Isolation kit	Plant and fungal tissues	up to 30 µg	Small-scale/Spin-column	30 min	PCR, qPCR, genotyping, sequencing, enzymatic manipulations
NZY Soil gDNA Isolation kit	Soil, sludge, sediment and stool samples	2-10 µg	Small-scale/Spin-column	~ 15 min ²	PCR, qPCR, genotyping, sequencing, enzymatic manipulations
NZY Microbial gDNA Isolation kit	Cell pellets of gram-positive and gram-negative bacteria	5-25 µg ¹	Small-scale/Spin-column	~ 15 min	PCR, qPCR, genotyping, sequencing, enzymatic manipulations

* Fresh, frozen or treated; ¹ From 30 mg wet weight cell pellet; ² Excluding lysis step.

MB21702	50 columns
---------	------------

Different sample sources (animal tissues, cultured cells, bacterial cells, mouse tails, yeast, stool, forensic and clinical samples) can be used for gDNA isolation with NZY Tissue gDNA Isolation kit

All protocols are optimized for different biological matrices to provide high quantity of pure genomic DNA

NZYTech recently discontinued NZY Blood gDNA Isolation kit (Cat. No. MB136) since the NZY Tissue gDNA Isolation kit serves for the same use

RNA PURIFICATION

NZYTech's RNA Isolation kits are spin column silica-based systems designed for the easy and fast purification of RNA at the highest integrity from a variety of sources, such as animal tissues, cultured cells and bacteria (NZY Total RNA Isolation kit), serum, plasma, saliva, nasal samples, blood and environmental samples (NZY Viral RNA Isolation kit). Recently, NZYTech developed the NZY Mag Viral RNA/DNA Isolation kit, IVD (MD04881/2), which is a magnetic bead technology-based nucleic acid purification kit designed to recover RNA and DNA from viral particles contained in transport medium from human respiratory swabs.

NUCLEIC ACIDS CLEAN-UP

NZYGelpure kit is designed for the purification of DNA (50 bp to 20 kb) from TAE/TBE agarose gels and for direct purification of enzymatic reactions. NZYGelpure purification kit utilizes a silica-gel based membrane which selectively adsorbs up to 20 µg of DNA fragments in the presence of specialized binding buffers. NZYDNA Clean-up in 96 well format is available for high-throughput protocols.

DNA POLYMERASES & OTHER PCR ENZYMES

NZYTech's DNA polymerases offer great performance expressed by high yields and extreme sensitivity. Each enzyme presents different features to cover a wide range of applications. Thus, we organized enzymes by applications allowing you to direct your selection to the enzymes that most suit your experiment. The Supreme version of each enzyme displays a hot-start-like activity for improved specificity and sensitivity.

	DNA polymerase	Features	Product length	Extension (sec/kb)	Proof reading	Sensitivity*	Product overhang	Cat. No.
Power & Routine	NZYTaq II	High yields with minimal optimization	≤ 6 kb	15-30	No	5 pg	3'-A	MB354
	Supreme NZYTaq II	Hot-start-like version of NZYTaq II	≤ 6 kb	15-30	No	1 pg	3'-A	MB355
	Speedy NZYTaq	Powerful PCR in 30-60 min	≤ 6 kb	5-10 [#]	No	50 pg	3'-A	MB403
	Speedy Supreme NZYTaq	Hot-start-like PCR in 15-60 min	≤ 6 kb	5-10 [#]	No	1 pg	3'-A	MB390
Fidelity	NZYProof	High fidelity proofreading enzyme	≤ 10 kb	60	Yes	5 ng	Blunt	MB146
	Supreme NZYProof	Hot-start-like version of NZYProof	≤ 10 kb	15-30	Yes	1 ng	Blunt	MB283
	Speedy NZYProof	High fidelity PCR in 30-60 min	≤ 2 kb	5	Yes	10 ng	Blunt	MB404
	Speedy Supreme NZYProof	Fast & powerful fidelity PCR	≤ 2 kb	2	Yes	1 ng	Blunt	MB436
Long	NZYLong	Increased processivity for extended PCR	≤ 20 kb	60	No	5 ng	Mixed	MB003
	Supreme NZYLong	Hot-start-like version of NZYLong	≤ 25 kb	60	No	1 ng	Mixed	MB331

*Measures the minimal quantity of human gDNA required to amplify a 1 kb template

[#] For DNA fragments lower than 2kb, use 5 sec/kb

NZYTaq II DNA polymerase: Robust stability at high temperatures

Activity of NZYTaq II DNA polymerase (individual enzyme and master mix formats) after 3 days at high temperature storage. NZYTaq II DNA polymerase and NZYTaq II 2x Green Master Mix were stored during 3 days at 42 °C. Controls of the same batches were kept at -20 °C. Then, the activity was assayed in a PCR experiment to amplify a 1-kb fragment using as template a dilution series of human genomic DNA (from 20 ng to 32 pg); numbers represent the amount of DNA template used (1: 20 ng; 2: 4 ng; 3: 0.8ng; 4: 0.16 ng; 5: 0.032 ng; nc: negative control without DNA). M: NZYDNA Ladder III (Cat. No. MBO44)

REAL-TIME PCR

qPCR MASTER MIXES

NZYTEch has developed and optimized two of the most widely used real-time fluorescent PCR chemistries: the probe-detection technology (Probe Mixes) and the intercalating green dye chemistry (Green Mixes). NZYSupreme mixes are ultra-sensitive mixes developed with a dual hot-start mode and suitable for standard thermal cycling protocols. NZYSpeedy mixes present a higher performance for the faster real-time PCR protocols. Passive reference dye based on ROX™ dye is used to normalize the fluorescent reporter signal in real-time PCR. NZYTEch provides highly optimized mixes that are compatible with different thermocyclers available on the market. NZYTEch recently increased its portfolio of real-time qPCR products by introducing lyophilized master mixes, which are very stable formulations that allow an eco-friendly and cost-effective room temperature shipment.

Choose the mix with the reference dye that is most appropriate for your instrument with the help of the qPCR Selection Guide below.

ONE-STEP RT-qPCR KITS

NZYTEch provides One-step real-time PCR kits designed to directly amplify RNA samples on your real-time PCR instrument. These kits were developed to enable cDNA synthesis from input RNA followed by PCR amplification of the cDNA in the same reaction well, with no extra hands-on requirement or further reagent addition. This not only reduces the number of sample manipulations but also saves time. One-step kits are available for Probe and Green detection. Choose the One-step real-time PCR kit that most suits your experiment and that is most appropriate for your instrument through the analysis of the qPCR Selection Guide presented in page 22.

ONE-STEP RT-qPCR MASTER MIXES

NZYTEch provides One-step real-time qPCR master mixes containing all required components (except primers/probe and template) to perform reverse transcription and qPCR amplification in a single-step. This offers great convenience and minimizes the risk of errors and contaminations. These master mixes were engineered with a dual hot-start enzyme control mechanism to provide the highest detection sensitivity. In addition, the latest developments in PCR enhancers were introduced. Lyophilized versions are also available as very stable room temperature options.

One-Step RT-qPCR Probe Master Mixes

NZYSupreme RT-qPCR Probe MM (2x)		NEW NZYSupreme Multiplex RT-qPCR Probe MM (2x)	
MB41401	2 mL (200 x 20µL rxs)	MB44201	2 mL (200 x 20 µL rxs)
MB41402	5 mL (500 x 20 µL rxs)	MB44202	5 mL (500 x 20 µL rxs)
MB41403	20 mL (2000 x 20 µL rxs)	MB44203	20 mL (2000 x 20 µL rxs)

NZYSupreme One-step RT-qPCR Probe Master Mix: High-performance across a wide dynamic range of very low RNA inputs (<0.5 pg)

A 10-fold serial dilution of total RNA from mouse liver (375 ng to 0.375 pg) was used as template for a one-step real-time RT-qPCR experiment to detect the rpl27 housekeeping gene.

Panel A: evidence of the high performance and linearity when using NZYSupreme One-step RT-qPCR Probe Master Mix. Panel B: standard curve (slope: -3.28; efficiency: 101.7%).

- Ultra-sensitive: Detect low-copy number targets (8 copies)
- Dual Hot-Start mode for Supreme versions
- Include RNase Inhibitor
- Efficient multiplexing
- Lyo formats stable at Room Temperature

Lyo One-step RT-qPCR Master Mixes

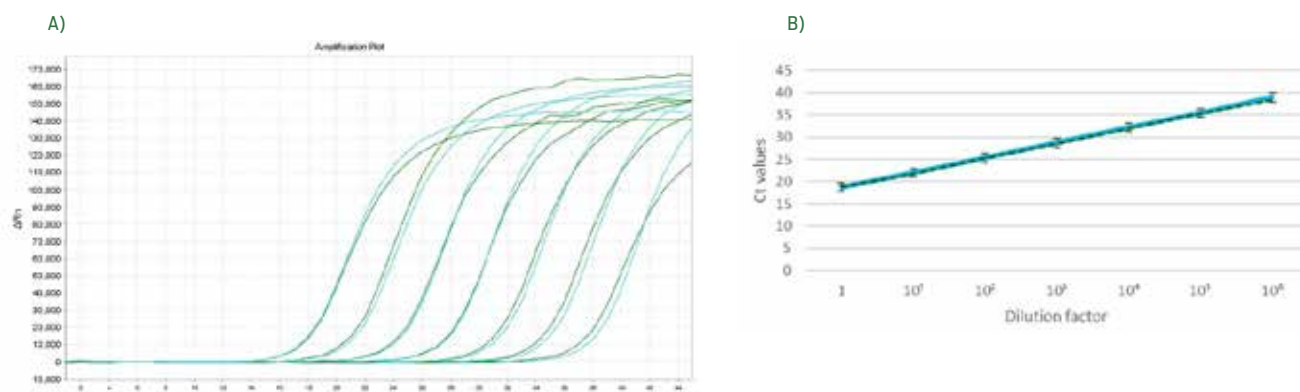

Lyo NZYSupreme RT-qPCR Probe MM (2x)

MB41501 For 1.5 mL (150 x 20 μ L rxs)

RNA SYNTHESIS

NZYTEch offers convenient kits for the *in vitro* transcription of DNA into RNA using a T7 RNA polymerase that is highly specific for T7 phage promoters. The enzyme is also provided separately for your routine protocols.

NZY T7 RNA Synthesis kit	
MB35301	50 reactions

NZY T7 High Yield RNA Synthesis kit	
MB36301	50 reactions

T7 RNA polymerase	
MB08001	10000 U (20 U/ μ L)
MB08003	10000 U (200 U/ μ L)

cDNA SYNTHESIS

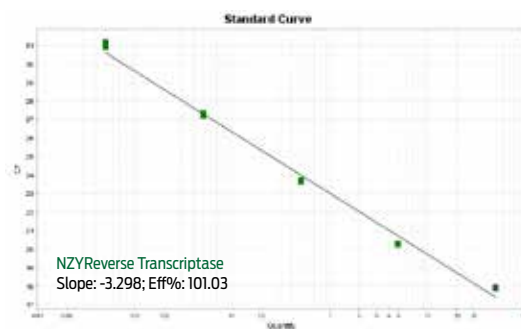

Reverse transcriptases

NZY M-MuLV and NZY Reverse Transcriptases lack 3'-5' exonuclease activity and have no intrinsic RNase H activity. NZY Reverse Transcriptase is a thermostable (50-55 °C) and sensitive enzyme with fast synthesis capacity (30 min reaction). Supreme NZYReverse Transcriptase was recently developed to increase inhibitor resistance, range and thermostability.

NZY M-MuLV Reverse Transcriptase	
MB08301	20000 U
MB08302	100000 U

NZY Reverse Transcriptase	
MB12401	20000 U
MB12402	100000 U

Lyo NZY Reverse Transcriptase	
MB40901	100000 U

NZYReverse Transcriptase vs Competition. Two-step RT-qPCR to detect the GAPDH gene from mouse total RNA (dilutions from 1 μ g to 0.1 ng). After reverse transcription, the cDNA obtained was used in a qPCR assay with NZYSupreme qPCR Green Master Mix (2x) (Cat. No. MB419).

cDNA kits

NZYTEch offers convenient, reliable and cost-effective kits to generate high quality cDNA for different downstream applications, such as standard PCR, cDNA library construction, or two-step RT-PCR assays. cDNA kits contain all the components required to synthesize first-strand cDNA (except the template RNA), at optimal conditions. A mixture of NZY Ribonuclease Inhibitor and one of the NZYTEch's reverse transcriptases is included in all kits. NZY First-Strand cDNA Synthesis kits provide more specific synthesis of cDNA, while NZY M-MuLV First-Strand Synthesis kits are a cost-effective alternative, also providing high yields of full-length cDNA at low reaction temperatures.

Features	NZY First-Strand cDNA Synthesis Kits	NZY M-MuLV First-Strand cDNA Synthesis Kits
Reverse Transcriptase	NZY Reverse Transcriptase	NZY M-MuLV Reverse Transcriptase
Product length	up to 7 kb	up to 7 kb
Optimal reaction temperature	50 °C	37 °C
Reaction time	30 min	50 min
Sensitivity	10 pg – 5 µg total RNA	10 pg – 5 µg total RNA
Amplification of GC-rich templates	yes	-
Amplification of secondary structure-rich templates	yes	-
Available as kits with separate oligos	yes	yes

RNA PROTECTION

NZYTech Ribonuclease Inhibitors are active against RNases (E. C. 3.1) of the pancreatic type (RNase A, B and C) and are useful in applications where eukaryotic RNase contamination is a potential problem. For reactions that do not tolerate higher levels of DTT, please use the oxidation-resistant NZY Ribonuclease Inhibitor (no DTT). RNase Cleaner is a reagent that completely removes RNase contamination surfaces and plasticware, allowing to maintain a RNase-free working area.

RNase Cleaner

MB16001	500 mL
---------	--------

NZYRibonuclease Inhibitor (no DTT): Efficient protection of RNA against RNases in non-added DTT reactions

The ability of NZYRibonuclease Inhibitor (no DTT) to inhibit ribonuclease (RNase) activity was tested by pre-mixing 125 ng of mouse RNA with different amounts of the inhibitor enzyme (1:3 dilution series) and a cocktail of RNases from serum origin. No DTT was added in the reactions, which were incubated at 37 °C for 1 hour. A negative control (without NZYRibonuclease Inhibitor (no DTT)) and a positive control (only RNA not exposed to the RNases mixture) were introduced. The integrity of RNA was judged through a real-time one-step RT-qPCR experiment. Complete preservation of RNA integrity is observed in the presence of NZY Ribonuclease Inhibitor (no DTT) (in all dilutions tested), as measured by the successful amplification of the desired target in the real-time RT-PCR assay (the signal overlaps to that emitted by the positive control – intact RNA).

restriction enzymes

CONVENTIONAL
SPEEDY

RESTRICTION ENZYMES

NZYTECH offers a vast portfolio of restriction enzymes used in recombinant DNA technology. We present two different types of enzymes: Conventional and Fast Digestion (Speedy). Each conventional restriction enzyme is provided with a specific reaction buffer in which the enzyme is 100% active. For double digestions, we recommend to use the 10x NZYBuffer U (sold separately). Speedy restriction enzymes are a new generation of DNA modifying enzymes that were developed for rapid DNA digestion (digestion periods range from 5-15 min) and are 100% active in the 10x NZYSpeedy Buffers Colourless or Orange.

DNA cloning and mutagenesis kits

EASY CLONING & EXPRESSION

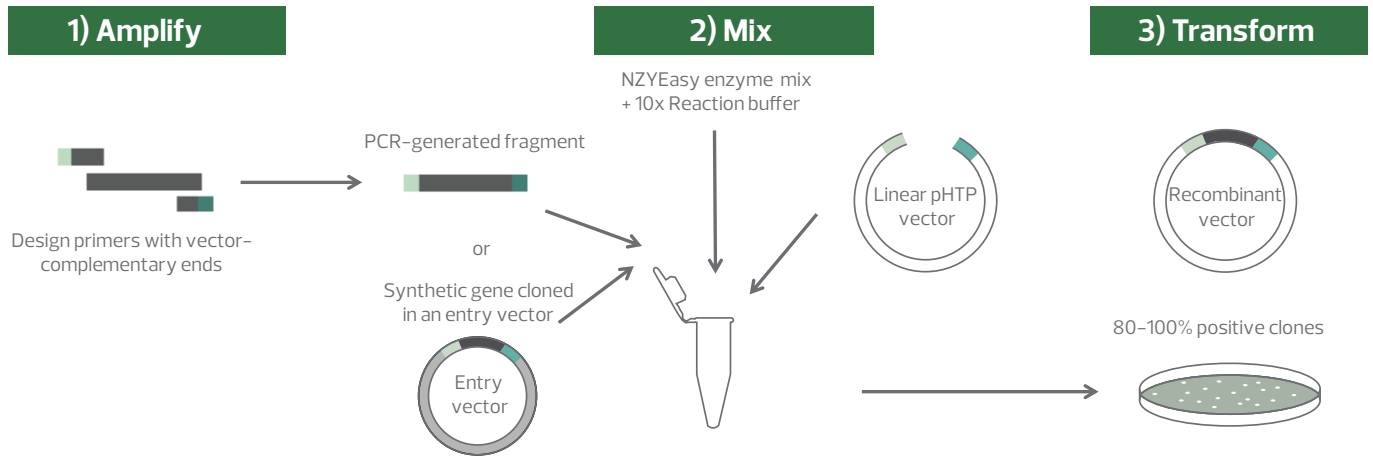

STANDARD CLONING

DNA MUTAGENESIS

DNA CLONING KITS

EASY CLONING & EXPRESSION

The NZYEasy Cloning & Expression System was designed to allow directional cloning of PCR-generated fragments or synthetic genes previously cloned in pUC-vectors into a linearized pHTP vector in a single reaction mediated by NZYEasy enzyme mix. The system allows achieving high cloning efficiencies and does not require the use of DNA ligases. In addition, no further treatment (e.g. restriction digestion, phosphorylation or blunt-end polishing) of the inserts is required.

NZYTEch provides ready-to-use pHTP vectors in separate kits. The portfolio of pHTP prokaryotic expression vectors, which includes a different range of fusion tags, offers the possibility to quickly assay levels of expression and solubility of the desired protein in multiple expression vectors simultaneously. Choose the pHTP vectors that most suits your experiments on the table below:

Vector	Features	Comments	Kit Cat. No.
pHTP0	<i>lac</i> promoter and <i>lacZ_a</i> reporter	High-copy number cloning vector for the NZYEasy Cloning & Expression System; allows blue/white screening during cloning (if adding IPTG and X-GAL)	MB281
pHTP1	N- and/or C-terminal 6xHis	Standard vector for high-level protein expression in <i>E. coli</i>	Kit I, MB282
pHTP2	N- and/or C-terminal 6xHis; N-terminal LLDsbC	Leader Less DsbC promotes cytoplasmic isomerization of disulfide bonds	Kit II, MB319
pHTP3	N- and/or C-terminal 6xHis; N-terminal mutDsbC	Inactive DsbC promotes cytoplasmic solubilization without isomerization of disulfide bonds	Kit III, MB320
pHTP4	N- and/or C-terminal 6xHis; N-terminal DsbC	DsbC promotes periplasmic isomerization of disulfide bonds	Kit IV, MB321
pHTP7	N- and/or C-terminal 6xHis; N-terminal DsbA	DsbA promotes periplasmic formation of disulfide bonds	Kit VII, MB322
pHTP8	N- and/or C-terminal 6xHis; N-terminal Trx	Trx enhances solubility of tagged proteins	Kit VIII, MB323
pHTP9	N- and/or C-terminal 6xHis; N-terminal GFP	GFP is a reporter molecule that allows monitoring protein localization	Kit IX, MB324
pHTP10	N- and/or C-terminal 6xHis; N-terminal NusA	NusA enhances solubility of tagged proteins	Kit X, MB325
pHTP11	N- and/or C-terminal 6xHis; N-terminal GST	GST enables glutathione-based affinity purification of tagged proteins while enhancing protein solubility	Kit XI, MB326
pHTP13	N- and/or C-terminal 6xHis; N-terminal GB1	GB1 enhances solubility of tagged proteins	Kit XIII, MB327
pHTP14	N- and/or C-terminal 6xHis; N-terminal KSI	KSI enhances solubility of tagged proteins	Kit XIV, MB328
pHTP16	N- and/or C-terminal 6xHis; N-terminal CpA	CpA enhances solubility of tagged proteins	Kit XVI, M3290
pHTP17	N- and/or C-terminal 6xHis; N-terminal CpB	CpB enhances solubility of tagged proteins	Kit XVII, MB330

PCR-generated fragments can be cloned into the pHTP0 cloning vector (included in the NZYEasy Cloning kit) or, alternatively, into one of the various kanamycin-resistant pHTP expression vectors (included in the different NZYEasy Cloning & Expression kits) without the need to go through the tedious and laborious intermediate stages.

DNA Cloning

The NZYEasy Cloning kit was designed for time-saving and cost-effective DNA cloning. It includes the pHTP0 vector (pUC-derivative) that allows blue/white screening for positive bacterial colonies (if adding IPTG and X-GAL).

STANDARD CLONING

NZYTech's DNA cloning kits are optimized to provide high-efficiency cloning based on easy protocols with no requirement for time-consuming restriction digests. To clone PCR-amplified fragments take into account the type of DNA polymerase that was used to generate the DNA fragment and choose the appropriate cloning kit: NZY-A PCR cloning kits are designed for cloning of DNA fragments amplified using non-proofreading polymerases, while NZY-blunt PCR cloning kit is designed to clone blunt-end PCR products amplified by proofreading enzymes. For a faster DNA cloning, the speedy version of NZY-A PCR cloning kit (NZY-A Speedy PCR cloning kit) should be chosen.

Blunt-end

NZY-blunt PCR cloning kit was designed to allow the direct cloning of PCR products with blunt-ends which result from amplifications using proofreading DNA polymerases such as NZYProof DNA polymerase (MB146).

NZY-blunt PCR cloning kit

MB12101	24 ligations + competent cells
MB12102	24 ligations

A-overhang

NZY-A PCR cloning kits were designed to clone PCR products produced by non-proofreading DNA polymerases such as NZYTaq II DNA polymerase (MB354). They take advantage of the terminal transferase activity of these polymerases which adds a single 3'-A overhang to each end of the PCR product. For a faster DNA cloning, NZYTech provides the NZY-A Speedy PCR cloning kit which allows direct cloning of PCR products with 3'-A overhangs in only 5 minutes at room temperature. Blunt-ended PCR fragments generated by amplification with proofreading polymerases can also be cloned using NZY-A PCR cloning kits after conducting an A-tailing procedure.

NZY-A PCR cloning kit

MB05301	24 ligations + competent cells
MB05302	24 ligations

NZY-A Speedy PCR cloning kit

MB13701	24 ligations + competent cells
MB13702	24 ligations

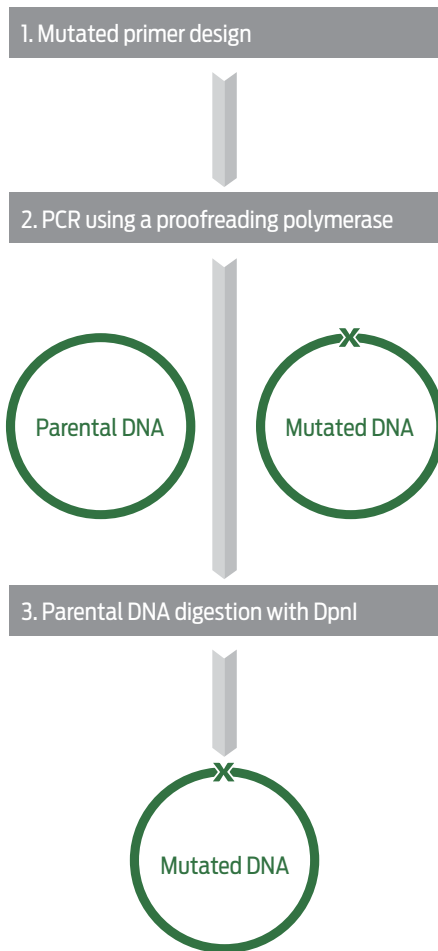

High efficiency cloning: >95% positive clones
Blue/white colony screening
5 minutes cloning with NZY-A Speedy PCR cloning kit

DNA MUTAGENESIS

Site-Directed Mutagenesis can help you in a range of applications allowing to edit the desired DNA sequence by incorporation of single or multiple point mutations in any type of plasmid DNA. NZYTech's Mutagenesis kits provide simple and highly efficient methods to generate point mutations and delete or insert single (or multiple) nucleotides in plasmid DNA using PCR. NZYSupreme Mutagenesis kit was recently developed to reduce labor time and increase the efficiency of DNA editing.

Mutagenesis kits contain a proofreading DNA polymerase for PCR amplification of dsDNA plasmid to be mutated. NZYSupreme Mutagenesis kit includes Supreme NZYProof DNA polymerase, an engineered highly accurate, fast and sensitive variant of NZYProof DNA polymerase (the DNA polymerase present in NZYMutagenesis kit), formulated in a 2x concentrated master mix solution. Both Supreme NZYProof and NZYProof DNA polymerases ensure high fidelity for the exponential PCR amplification, thus reducing the unwanted secondary mutations and enabling amplification of large plasmids up to 15 kb. In addition, mutagenesis system requires the provision of two synthetic oligonucleotide primers containing the desired mutation. Mutated primers can be designed following standard guidelines (overlapping primers) or using an improved methodology (non-overlapping primers) recommended on NZYSupreme Mutagenesis kit. The mutagenesis protocol includes only three main steps:

1. Mutated primer design

Primers should have between 25 and 45 bases in length, with a melting temperature (T_m) of ≥ 78 °C; a GC content of 40% and should terminate in one or more C or G bases;

2. PCR amplification

Extension of the oligonucleotide primers with a proofreading DNA polymerase generates a mutated plasmid containing staggered nicks;

3. Digestion with DpnI

Digestion of PCR product with DpnI endonuclease for elimination of the parental methylated and hemimethylated DNA template and selection of the mutation-containing synthetic DNA (not methylated).

NZYTech provides convenient versions of the kit, which include highly efficient competent cells for mutated plasmid recovering.

	NZYMutagenesis kit	NZYSupreme Mutagenesis kit
Primer design:	Standard (overlapping primers)	Improved (non-overlapping primers)
DNA polymerase:	NZYProof DNA polymerase	Supreme NZYProof 2x Colourless Master Mix
PCR time:	2h 30	<1h 30 min
Digestion time:	1 hour (at 37 °C)	5-15 min (at 37 °C)

CELL PREPARATION & GROWTH

Competent cells preparation

NZYCompetent Cells Preparation Buffer is designed for the preparation of super competent *Escherichia coli* cells. The method is compatible with the classical heat shock transformation procedure and the transformation efficiencies are typically on the order of 10^8 - 10^9 transformants/ μg plasmid DNA with the most common *E. coli* strains.

NZYCompetent Cells Preparation Buffer

MB12001	100 mL
---------	--------

Culture media

NZYTech offers a selection of high quality culture media for a wide variety of applications. Our specific formulations were extensively tested for use in cloning, plasmid DNA preparation and protein expression.

Agar Granulated

Auto-Induction media

NZY Auto-Induction LB medium (powder) is an innovative culture medium developed for growing *Escherichia coli* to high cell densities, while obtaining high-levels of recombinant protein expression when using IPTG-inducible bacterial expression systems.

NZY Auto-Induction LB medium (powder)*

MBI7901	100 g
MBI7903	1000 g

* Product not available for use or sale in the United States

No need for IPTG induction
No need to monitor cell growth
Ideal for High-Throughput (HTP) methods
High protein yields

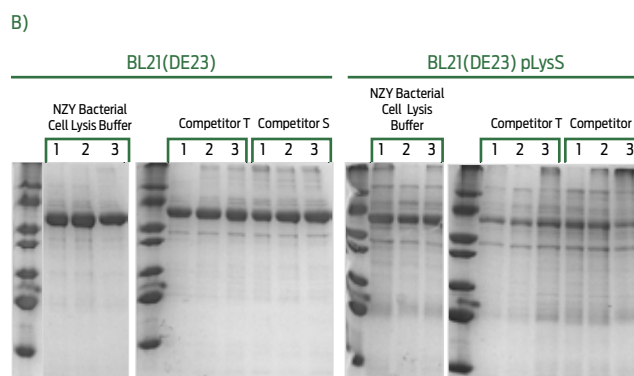

Cell disruption

NZY Bacterial Cell Lysis Buffer is an innovative product for the gentle disruption of *Escherichia coli* cell wall that generates a homogeneous cell-free extract. It provides a rapid and cost effective alternative to mechanical methods such as French Press or sonication for releasing recombinant and native proteins. This extraction reagent is a Tris buffered formulation (pH 7.5) with Lysozyme and DNase I provided separately.

NZY Bacterial Cell Lysis Buffer

MBI7801	250 mL
MBI7802	2 x 250 mL

Ready-to-use formulation
Ideal for High-Throughput (HTP) methods
DNase I and Lysozyme provided separately

Comparing the efficiency of *Escherichia coli* cell lysis for protein extraction using NZY Bacterial Cell Lysis Buffer and two similar competitor products. Cells from two strains of *E. coli* BL21(DE3) and BL21(DE3 pLysS) were harvested from 5 mL of cultured media and lysed (in triplicates) using three different protein extraction chemicals: NZY Bacterial Cell Lysis Buffer, Competitor T and Competitor S.

A) Levels of extracted protein obtained were evaluated. B) The recombinant proteins (in triplicates) were purified through IMAC and separated through SDS-PAGE.

ladders & markers

DNA LADDERS

PROTEIN MARKERS

LADDERS & MARKERS

DNA LADDERS

NZYTech offers a ready-to-use set of DNA ladders suitable for standard gel electrophoresis applications. Ladders can be used to quantify the acid nucleic concentration based on band intensity and/or to accurately determine the molecular weight of the nucleic acids molecules.

NZYDNA Ladder I

MB04101	90 μ g (200 lanes)
MB04102	225 μ g (500 lanes)

NZYDNA Ladder II

MB04301	83 μ g (200 lanes)
MB04302	207 μ g (500 lanes)

NZYDNA Ladder III

MB04401	143 μ g (200 lanes)
MB04402	357 μ g (500 lanes)

NZYDNA Ladder IV

MB05801	10 μ g (50 lanes)
MB05802	30 μ g (150 lanes)

NZYDNA Ladder V

MB06101	120 μ g (200 lanes)
MB06102	300 μ g (500 lanes)

NZYDNA Ladder VI

MB08901	100 μ g (200 lanes)
MB08902	250 μ g (500 lanes)

NZYDNA Ladder VII

MB14701	170 μ g (200 lanes)
MB14702	425 μ g (500 lanes)

NZYDNA Ladder VIII

MB17501	150 μ g (200 lanes)
MB17502	375 μ g (500 lanes)

PROTEIN MARKERS

NZYTech provides different ready to-use protein markers containing unstained or stained proteins. All protein markers are mixtures of highly purified proteins of known molecular weight developed for assessing proteins relative molecular weights.

Low Molecular Weight Protein Marker II

MB21401	3 x 0.5 mL (300 lanes)
MB21402	6 x 0.5 mL (600 lanes)

NZYColour Protein Marker I

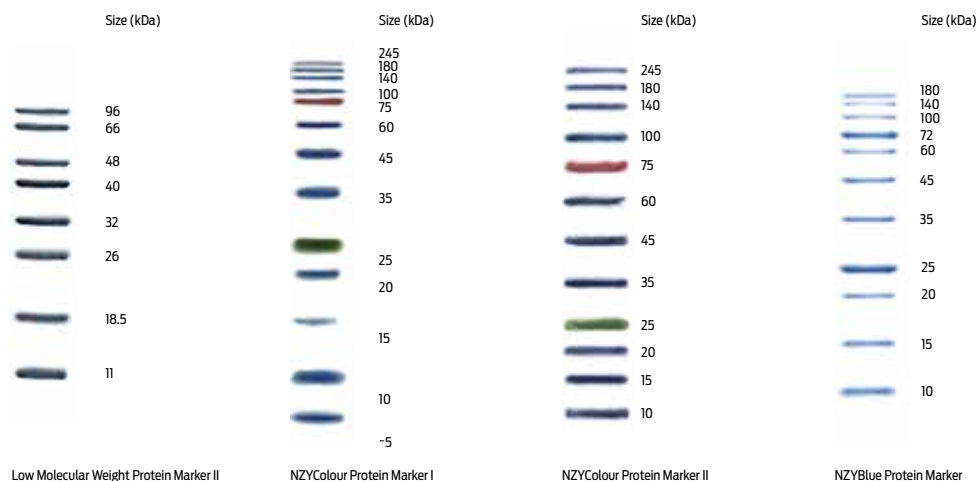

MB21501	1 x 0.5 mL (125 lanes)
MB21502	4 x 0.5 mL (500 lanes)

NZYColour Protein Marker II

MB09002	1 x 0.5 mL (125 lanes)
MB09003	4 x 0.5 mL (500 lanes)

NZYBlue Protein Marker

MB17601	1 x 0.5 mL (125 lanes)
MB17602	4 x 0.5 mL (500 lanes)

PDZ domains & venom peptides

PDZ DOMAINS

PDZ domains are structural modules of 80 to 90 amino acids found in signaling proteins of bacteria, yeast, plants, viruses and animals (Vicentelli et al. 2015, Nature Methods 12, 787-93). PDZ is an acronym combining the first letters of three proteins, which were first discovered to contain these domains: Post synaptic density protein (PSD95), Drosophila disc-large tumor suppressor (Dlg1), and Zonula occludens-1 protein (zo-1). PDZ domains play an essential role in a number of cellular processes by facilitating protein scaffolding and assembly of protein complexes. Protein complex formation between PDZ target molecules can lead to a number of signaling and regulatory cascades that may either promote or inhibit the activation of certain proteins. NZYTech offers a library of representative recombinant PDZ domains of the human proteome which includes 120 different constructs. For more information, please visit NZYTech website at www.nzytech.com.

VENOM PEPTIDES

Animal venoms are highly complex molecular cocktails containing a wide range of biologically active peptides that target, with high selectivity and efficacy, a variety of membrane receptors. These peptides and their biological activities possess important pharmacological, therapeutic and biotechnological values. Venom peptides are highly stable molecules displaying formidable affinity and selectivity while presenting low immunogenicity, making them attractive candidates for the development of novel therapeutics.

Venom peptides generally contain between 20 to 120 residues and include up to eight disulfide bonds that are critical for both biological activity and stability.

In recent years, considerable emphasis is being put on the discovery of novel molecules with therapeutic interest and venom peptides appear as a source of potential drugs. Unfortunately, the use of venom peptides as therapeutic or biotechnological molecules is still hampered by the difficulty to produce native and active proteins in sufficient amounts. In order to increase the availability of these molecules for academic or pharmaceutical partners, NZYTech is proud to offer a library of representative animal recombinant Venom Peptides. Our recombinant Venom Peptides are subjected to a variety of highly stringent quality control protocols to reach high purity levels. For more information, please visit NZYTech website at www.nzytech.com.

GENE SYNTHESIS

Gene synthesis has become an important tool in many fields of recombinant DNA technology. Whether you have limited cloning experience or simply want to save time, NZYTech's Gene Synthesis service helps you to quickly move your ideas from the planning stage to the laboratory. A highly motivated team is eager to provide you with a very efficient service affording considerable savings of time and money. Either if you select the custom or High-Throughput (HTP) Gene Synthesis service you will be offered a premium service that will deliver high quality and downstream efficacy.

NZYTech's scientists have also developed a highly robust gene design optimization software - **ATGenium** codon optimization algorithm - to maximize protein expression. Our proprietary algorithm comprehensively optimizes critical factors in transcription, translation and co-translational protein folding to deliver highest levels of expression in any host system. This service is offered at no extra cost for all gene synthesis services if required.

A. Levels of protein expression of three different eukaryotic proteins in *Escherichia coli* BL21 (DE3). The genes encoding these proteins were optimized by three algorithms for codons optimization, by two different competitors (light green) and using the ATGenium codon optimization algorithm developed by NZYTech (dark green).

B. High-throughput recombinant protein expression of CAZymes (Carbohydrate Active Zymes). Genes encoding these proteins were optimized using ATGenium, cloned into pHTPI expression vector and overexpressed in *E. coli* BL21 (DE3). High protein expression yields were obtained.

CUSTOM GENE SYNTHESIS

NZYTech's Custom Gene Synthesis service provides in vitro chemical synthesis, cloning and 100% sequence verification of any desired DNA sequence.

Sub-cloning into NZYTech's pTHP vectors is available upon request.

Gene Synthesis

HIGH-THROUGHPUT GENE SYNTHESIS

NZYTech's R&D team has developed a High-Throughput (HTP) Gene Synthesis platform to efficiently generate hundreds to thousands of synthetic genes. We offer a high quality HTP Gene Synthesis service for DNA fragments below 4 kb. HTP Gene Synthesis will allow to tackle difficult research projects such as: determination of structure-function relationships in different proteins, creation of novel antibody libraries, screening of gene variant libraries or optimization of protein function and expression. Our codon optimization technology - ATGenium algorithm - allows obtaining the highest possible levels of gene expression in different expressions hosts while retaining high levels of protein solubility.

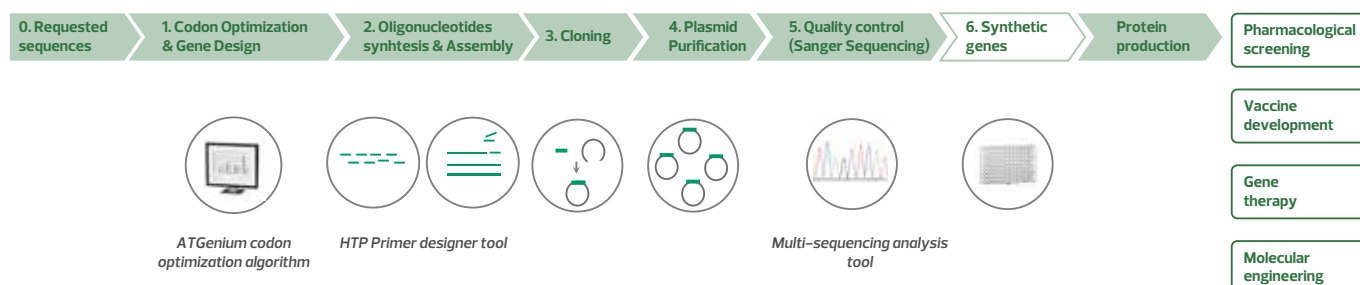

HTP Gene Synthesis (> 48 genes)

HTP Gene Synthesis (> 48 genes) (DNA fragments > than 5001 bp)	HS00508

HTP Gene Sub-cloning (> 48 genes)

HTP Gene Cloning (> 48 genes) (into pHTP vectors)	HS00203
---	---------

– Flexible gene design process
– Free codon optimization
– 100% sequence accuracy guaranteed
– Sub-cloning into any *E. coli* expression vector from our pHTP library

GENE FRAGMENTS

Gene Fragments

300-400 bp (price per fragment)	GF00108
401-500 bp (price per fragment)	GF00109
501-750 bp (price per fragment)	GF00110
751-1000 bp (price per fragment)	GF00111
1001-1250 bp (price per fragment)	GF00112
1251-1500 bp (price per fragment)	GF00113
1501-1800 bp (price per fragment)	GF00114

PEPTIDES

PEPTIDE SYNTHESIS

NZYTech offers a high-quality peptide synthesis service designed to ensure our customer's complete satisfaction. Every peptide is subjected to a variety of performance control steps to guarantee the highest quality. Peptides may be provided crude, desalted, or with 75% to 98% purity. In addition, NZYTech peptides can be subjected to a variety of chemical modifications upon request.

Lyophilized peptide delivered with the required sequence, purity and quantity
Several modifications available: phosphorylation, methylation, acetylation, amidation, fluorescence/dye labeling
Additional discounts for large-scale peptide synthesis orders

GLYCOBIOLOGY

NZYTECH CAZYMES: HIGHLY PURE, STABLE AND OPTIMIZED RESEARCH TOOLS FOR SCIENCE AND INDUSTRY

1. A LARGE AND DIVERSE PORTFOLIO

NZYTech R&D department, individually or in collaboration with the CAZy community, is building a large and diverse portfolio to foster science and industrial progress. All proteins have a recombinant origin and are produced and purified from *Pichia pastoris* or *Escherichia coli*. In this catalogue you will find more than 1000 CAZymes, covering >200 CAZy families (www.cazy.com) and >150 EC number activities (www.enzyme.expasy.org).

2. ULTRA-PURE FOR A VARIETY OF APPLICATIONS

NZYTech CAzymes are purified using a comprehensive list of chromatography protocols to achieve the highest level of protein purity. As an example, the figure below provides an SDS-PAGE analysis of Glycobiology CZ0604, CZ0580, CZ0621, CZ0633 and CZ0641. Purification level of all Glycobiology listed in this catalogue may be found at NZYTech website (www.nzytech.com).

3. REDUCED BATCH-TO-BATCH VARIATION AND LONG STORAGE STABILITY

NZYTech devotes significant efforts to minimize batch to batch variation and improve protein stability. In the Figure below 4 batches of Xylanase 11A from *Clostridium thermocellum* (CZ0003), produced in 2013, 2014, 2015 and 2016, were tested in March 2018 for molecular integrity and protein purity. The data reveals that there is minimal variation in molecular integrity up to 5 years after production (Panel B). Thus, it is important to follow the storage guidelines provided.

4. NZYTECH CAZYMES ARE THOROUGHLY CHARACTERIZED AND THEIR BIOCHEMICAL PROPERTIES DESCRIBED IN LITERATURE

Although NZYTech provides CAZymes as highly pure recombinant proteins and not functionally assessed, the majority of NZYTech CAZymes have been thoroughly characterized and their enzymatic properties is described in the literature. The reference of the paper describing such properties is provided in the product manual which allows you to select the one most suited for your experiments.

analytical test kits

ANALYTICAL PRODUCTS

PRINCIPLES & FEATURES

UV TESTS

NZYTEch test kits are based on enzymatic reactions and performed using spectrophotometric methods.

The principle of the enzymatic tests is based on the NAD(P)⁺/NAD(P)H system and uses highly pure enzymes engineered to display a premium performance. The enzymes used in these analytical kits produce or consume NAD(P)H, which strongly absorbs the UV radiation at 340 nm (extinction coefficient of 6300 M⁻¹cm⁻¹).

COLORIMETRIC TESTS

The principle of the enzymatic tests based on a chromogenic reaction is the formation of a coloured compound, which absorbs at the visible region of the spectrum. The coloured compound results from the interaction between the product of a first enzymatic reaction and a chromogenic compound. In this case, the concentration of the analyte must be determined by using a standard curve.

- Endpoint analysis
- Easy to use, simple protocols
- Rapid analysis
- Accuracy and precision
- Safe to the operator
- Standards included

REQUIRED MATERIAL

- Spectrophotometer
- Micropipettes set with disposable plastic tips to accurately dispense volumes from 20 µL to 1000 µL
- Cuvettes
- Basic filtering or other simple sample treatment device

APPLICATIONS

Nome	Kit size	Range	Detection Limit	Food Industry	Feed Industry	Wine Industry	Fermentation Industry	Dairy Industry	Biofuel	Catalogue No

TERMS & CONDITIONS

Thank you for browsing our catalogue of products for life science research!

We are excited to offer you a wide range of innovative offerings that are designed to deliver superior performance for research in the fields of molecular biology, molecular services, glycobiology, and analytical products.

As you browse through the catalogue, you may have questions or concerns about the use and safety of our products, as well as the shipping conditions. To address these issues, we have included a QR code that will provide you with access to our terms and conditions. By scanning this QR code and taking the time to review the terms and conditions, you can ensure that you are using our products safely and effectively, as well as familiarize yourself with the shipping conditions for your convenience.

These terms outline the proper handling and use of our products, as well as any potential risks or liabilities associated with them. We are committed to delivering products that are not only innovative, but also designed to deliver superior performance.

Thank you for choosing us as your partner in the exciting world of life science research.

Scan the QR code now and discover all the amazing products and services we have to offer!
